LEVEL I

Fountas & Pinnell	I
Reading Recovery	15-16
DRA	16

My body has many systems that keep it alive. The boss of all those **body systems** is my **brain**.

My brain helps me listen, think, and speak.

It helps me see, touch, taste, and smell.

It helps me laugh when I'm happy or cry when I'm sad.

My brain helps me eat.
It also keeps my heart beating
and my lungs breathing.

My brain works hard as the boss
of my body.
It sits in my **skull** and works
all the time.

My brain uses my **nervous system** to do much of its job.
My nervous system passes **messages** between my body and my brain.

It passes messages using a highway of **nerves**.
Nerves can be found all over my whole body.

Here's how my nerves and brain send messages in a game of tag.

A friend tags my arm
to make me "it."
Nerves in my arm send
a message to my brain.

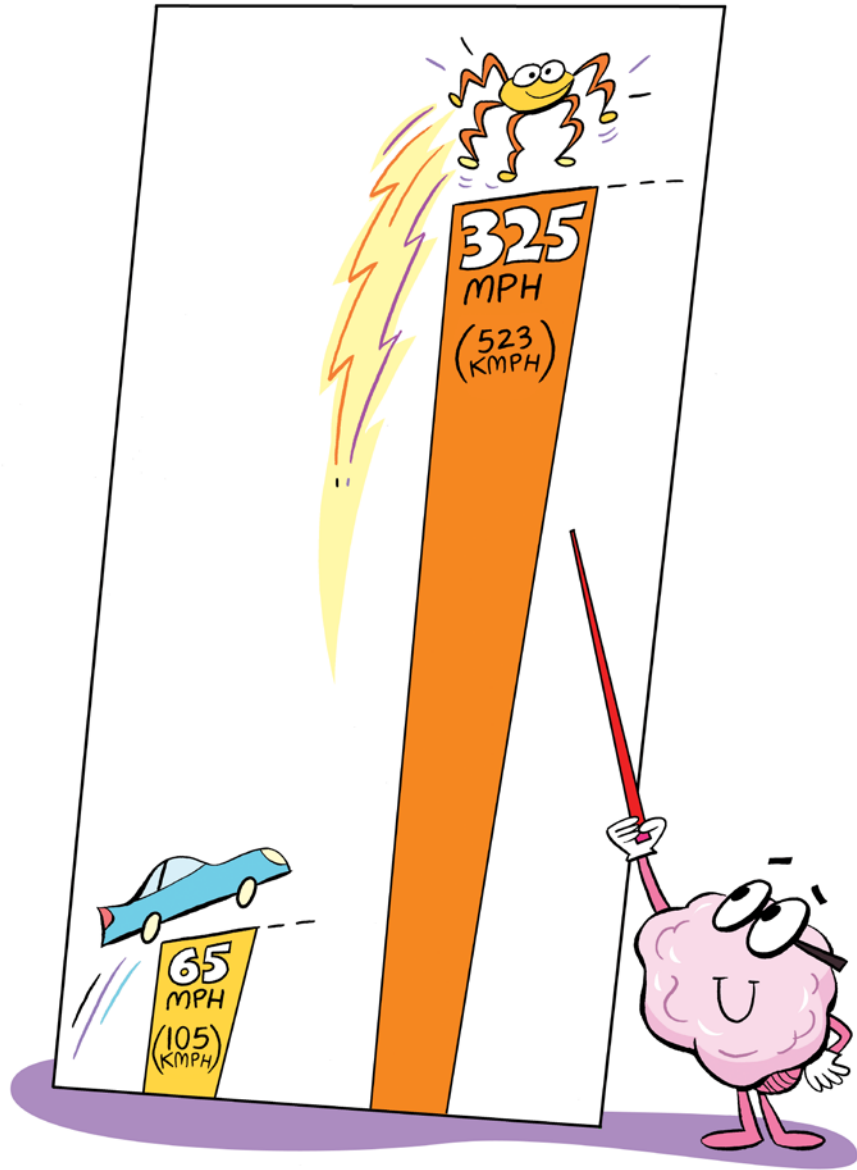

My brain sends a message
to my legs to run.
I run after my friend
to tag her back.

It takes almost no time for me
to feel the tag and start running.
My brain and nerves send
messages to each other very fast.

Messages can go up to five times faster than cars on a highway.

My brain works for me all the time. It works even when I sleep.

My brain is the hardworking boss of all of my body's systems. My body couldn't do anything without it!

Glossary

- body systems** (n.) groups of organs in the body that work together (p. 3)
- brain** (n.) the organ in a human or other animal's head, used for thinking and controlling the body (p. 3)
- messages** (n.) information or signals passed from one person or place to another (p. 7)
- nerves** (n.) fibers in the body that carry messages between the brain and other parts of the body (p. 8)
- nervous system** (n.) the body system that gathers information from and responds to the senses, and affects thinking and behavior (p. 7)
- skull** (n.) the bones that surround the brain and make up the head and face (p. 6)
